SMAG REU 2022

Sediment Transport Analysis with Applications to Coastal Resilience

Olivia Hopkin and Ruby Bouhassira

Dr. Robert J. Weaver

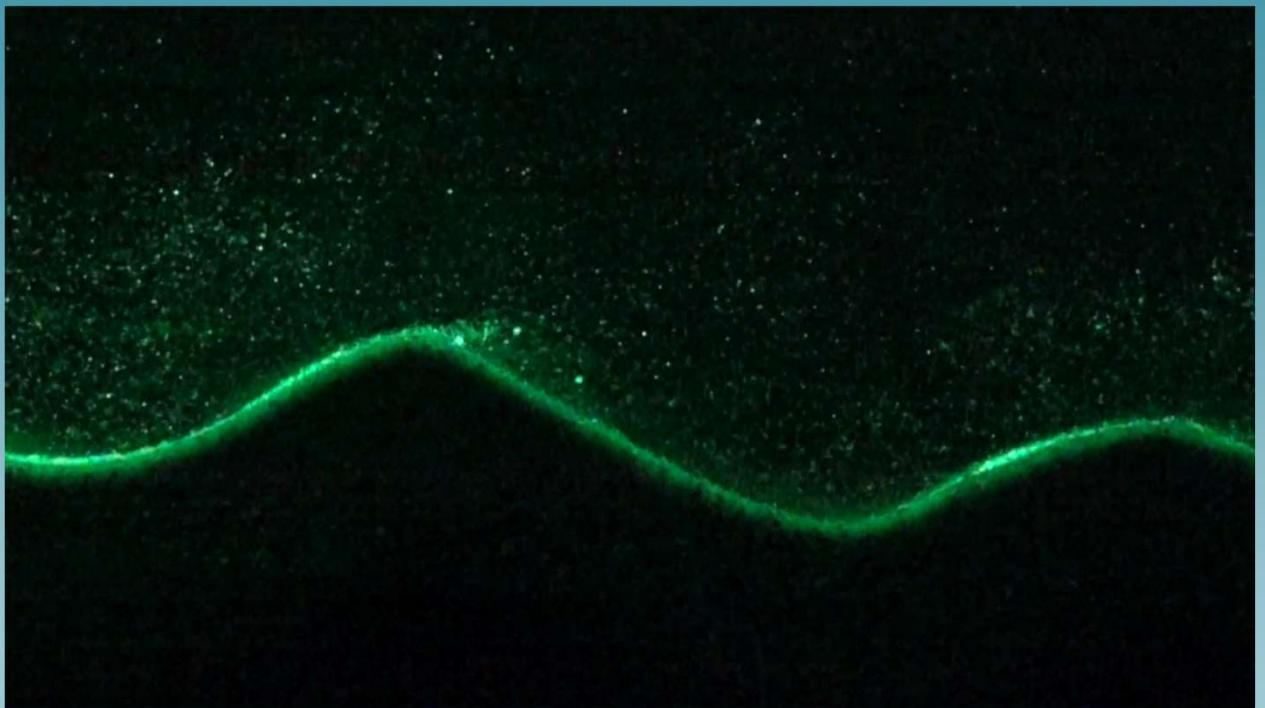

Dr. Nezamoddin N. Kachouie

Caroline Hoch

Overview

- Introduction
- Background Terms
- Prior Research
- Methods
- Preliminary Results
- Future Research
- Q&A

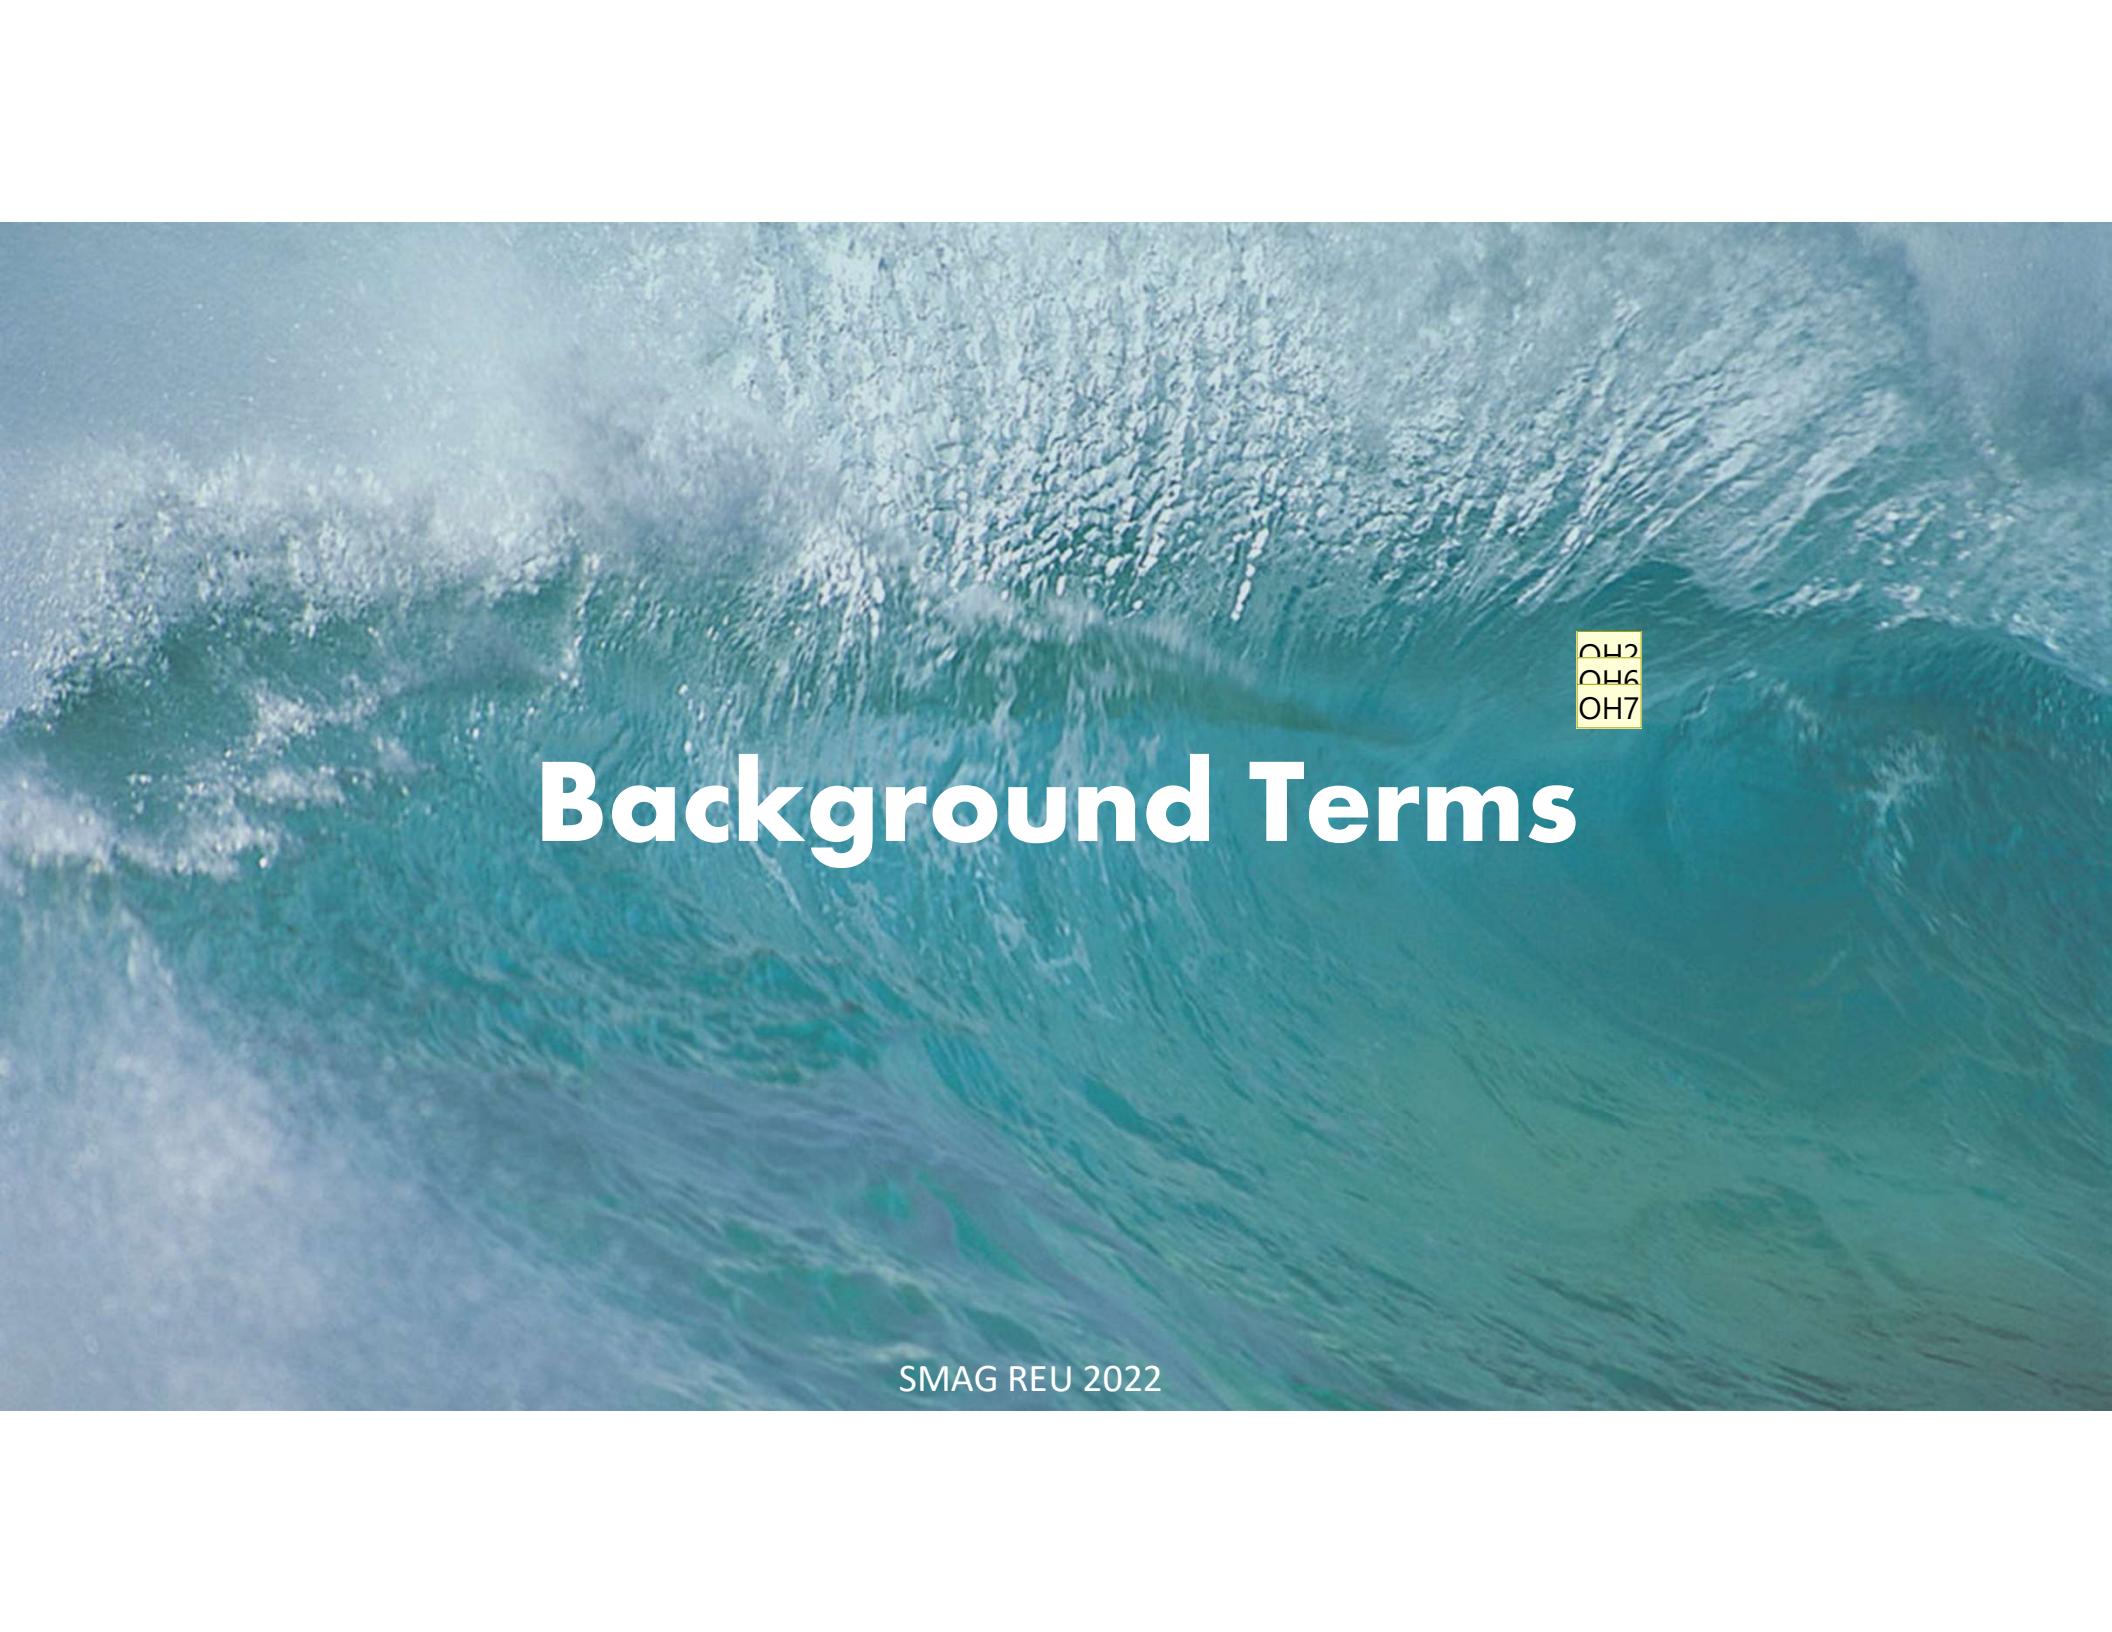

Coastal Resilience

- Restoration to pre-hazardous event conditions
- Preventative action is more cost effective [1]

Regular Waves

- Single frequency
- Sinusoidal

Irregular Waves

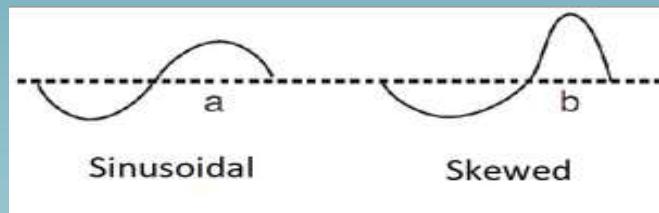

- Multiple frequencies
- Occur in nature

This figure in [College Physics: OpenStax](#) by Rice University is licensed under [CC BY-SA-NC](#)

Wave Linearity

- Linear region
 - Simple sinusoid
 - Nonlinear region
 - Skewed
- Ursell Number
 - Dimensionless
 - Dictates movement

$$U = \frac{H}{h} \left(\frac{\lambda}{h} \right)^2 = \frac{H \lambda^2}{h^3}$$

H = wave height
 h = average water depth
 λ = wavelength

Shields Parameter

- Velocity that initiates sediment movement
- Dimensionless

$$\theta = \frac{\tau}{(\rho_s - \rho)gD}$$

τ = shear stress

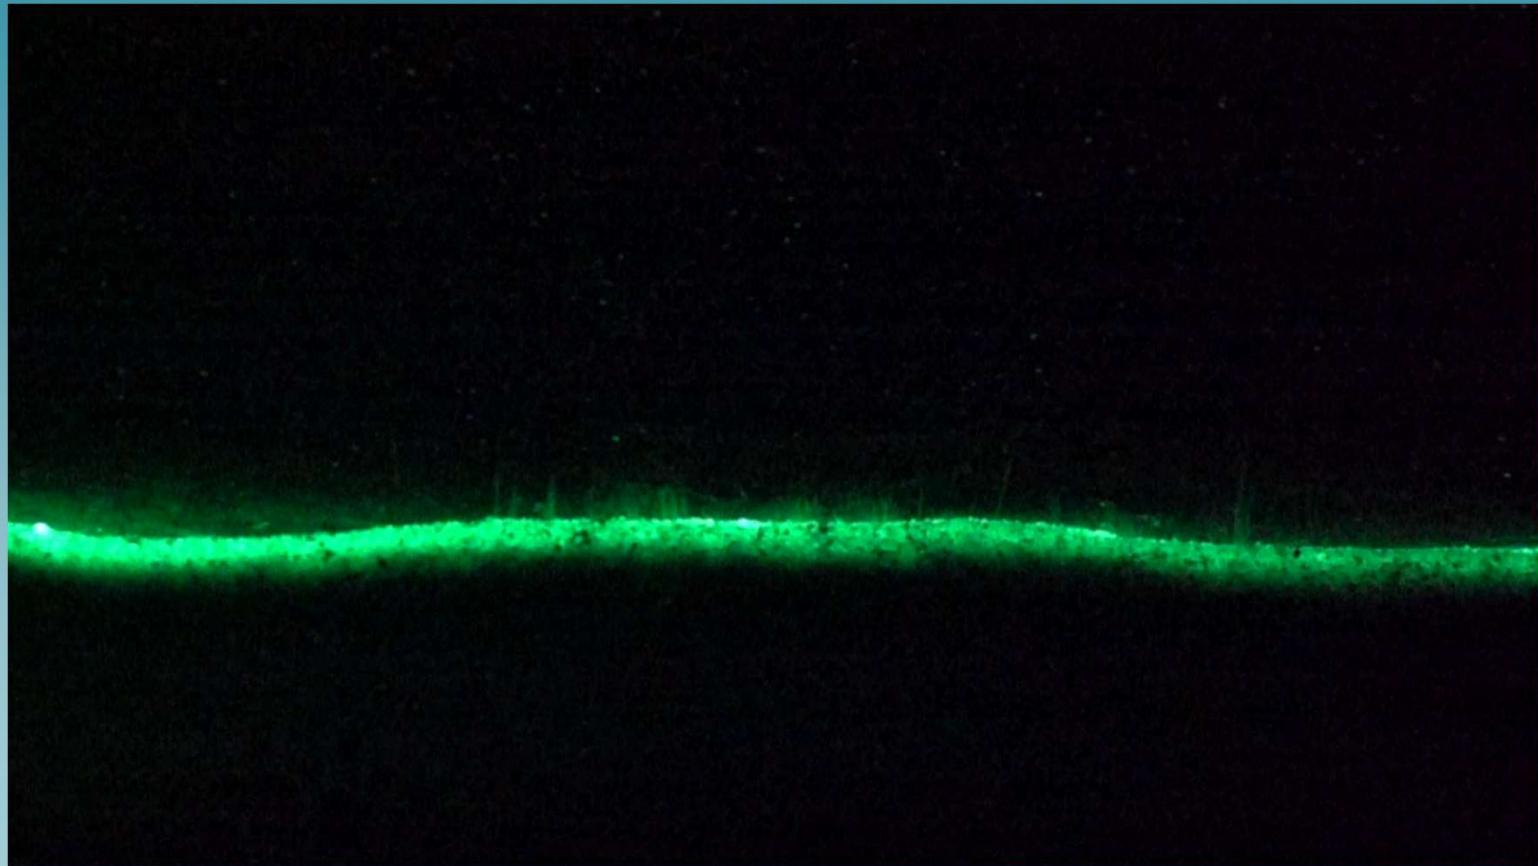

ρ_s = sediment density

ρ = fluid density

g = gravity

D = average sediment diameter

Nonlinear Region of a Wave

Recent Research

- Wave height has a significant effect on the thickness of near-bed movement [2]

This figure in [NOS Education](#) by National Ocean Service

Recent Research

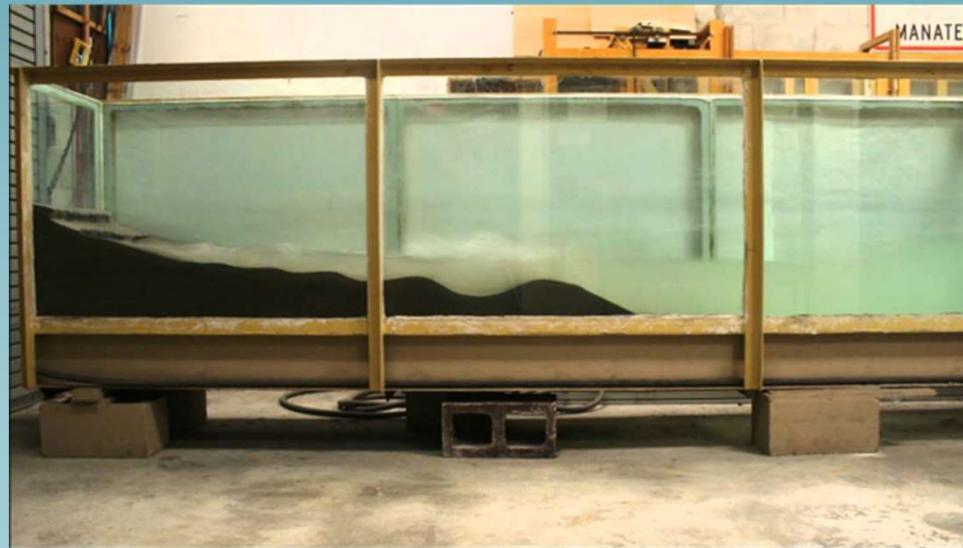

- Examined sediment transport in rip currents
- Found almost half of the sediment was transported in the bottom 10% of the flow [3]

This photo by [Unknown](#) author is licensed under [CC BY-SA-NC](#)

Dr. Weaver's Recent Research

- Sediment transport under different wave conditions
- PIV analysis and time lapse videography
- Ursell numbers > 90 = sediment movement onshore

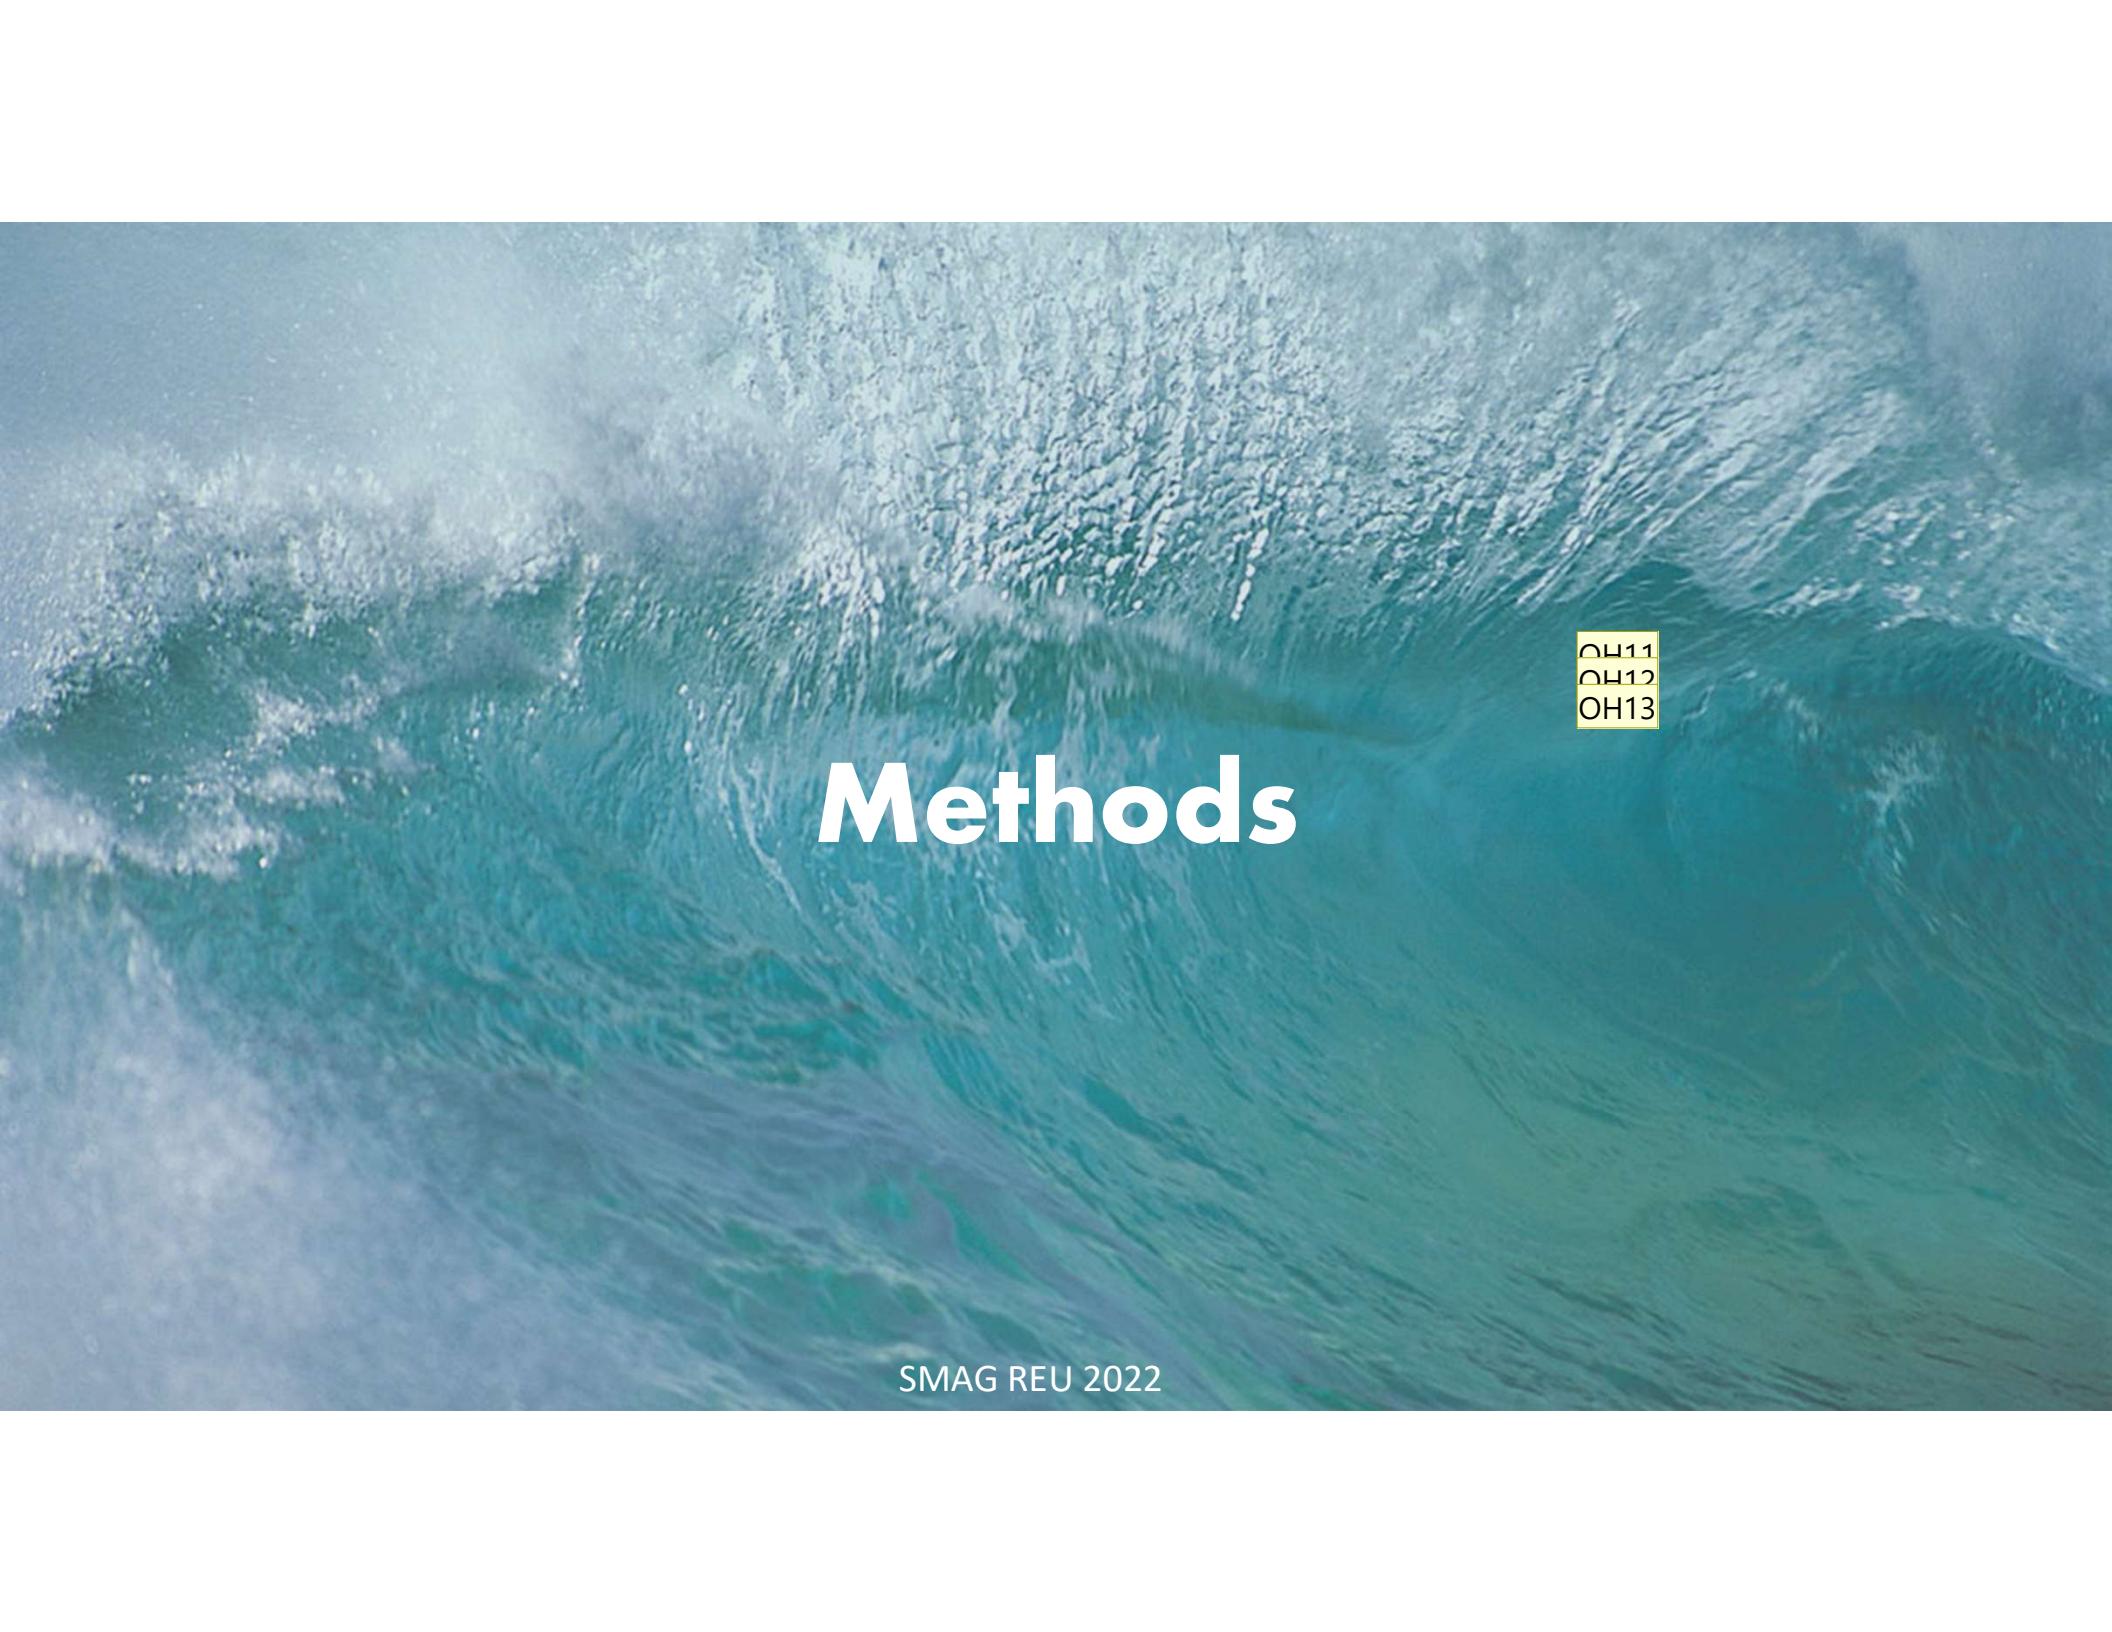

SMAG REU 2022

Time-lapse Video – 3 Seconds

- Volume of sand calculated in each panel to determine onshore or offshore sediment movement

SMAG REU 2022

Panel 5: Regular

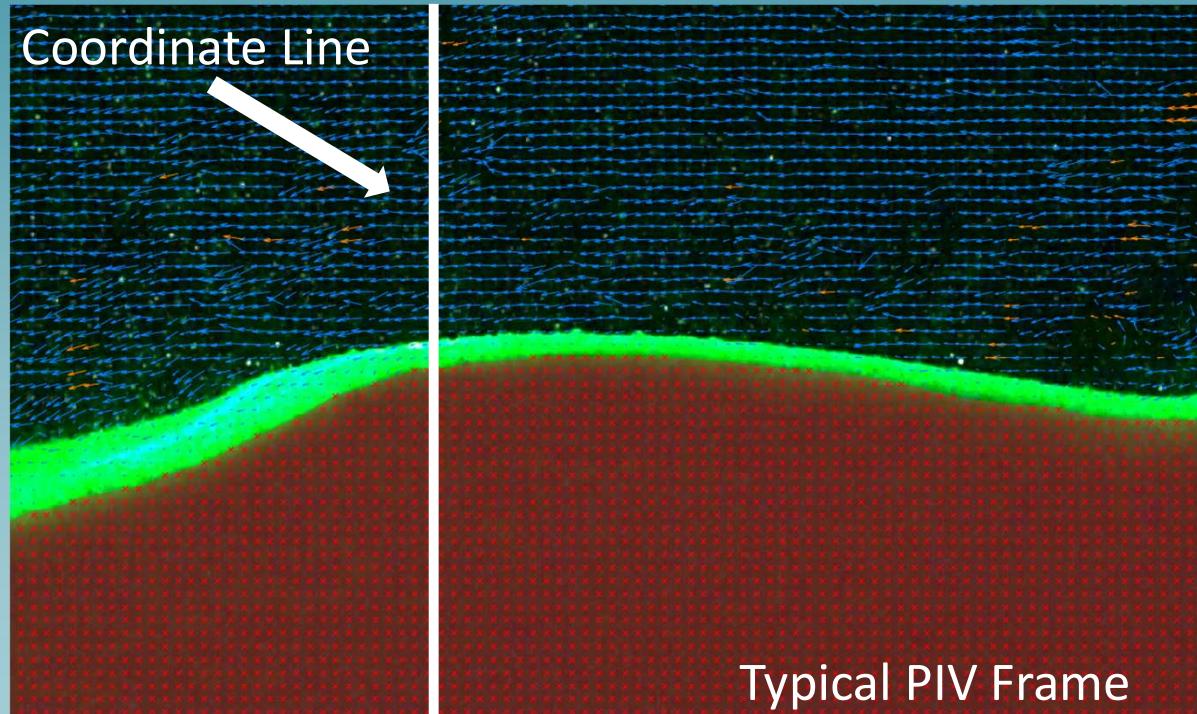

Frame #1230

Frame #2560

Particle Image Velocimetry

- PIV is accurate enough to be viewed as “ground truth” [4]

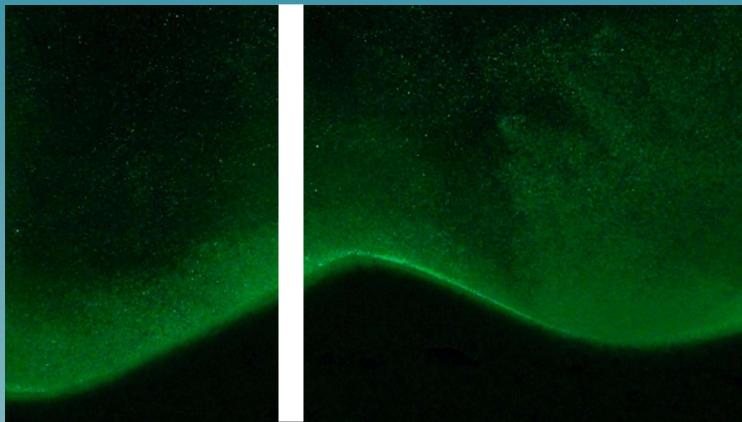

Objectives

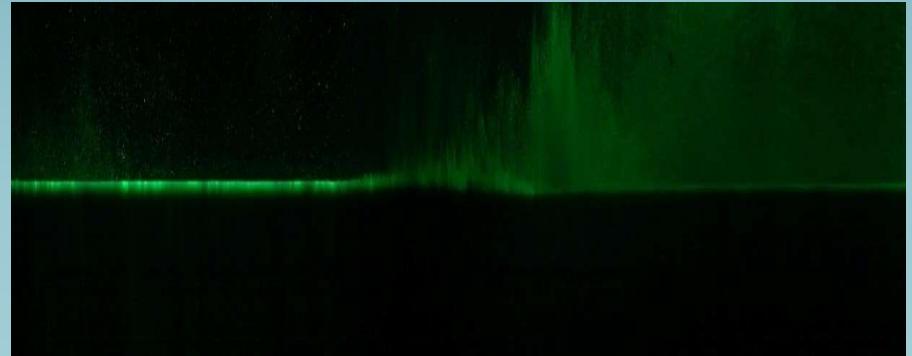

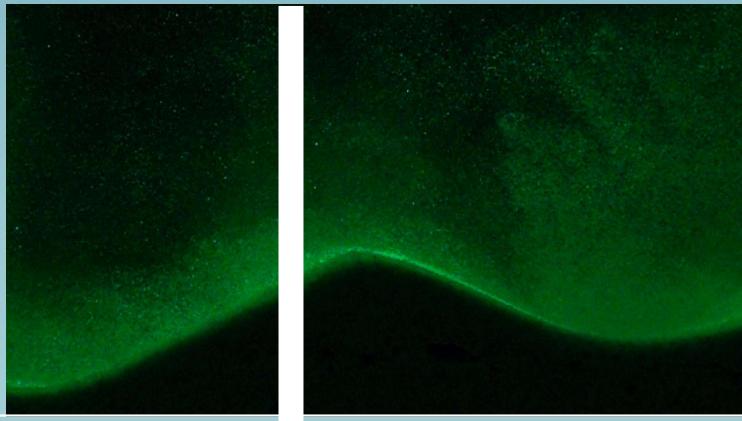

- Better understand cross-shore sediment transportation
- Measure the thickness of the active bed

Timestack Images

Frame #0380

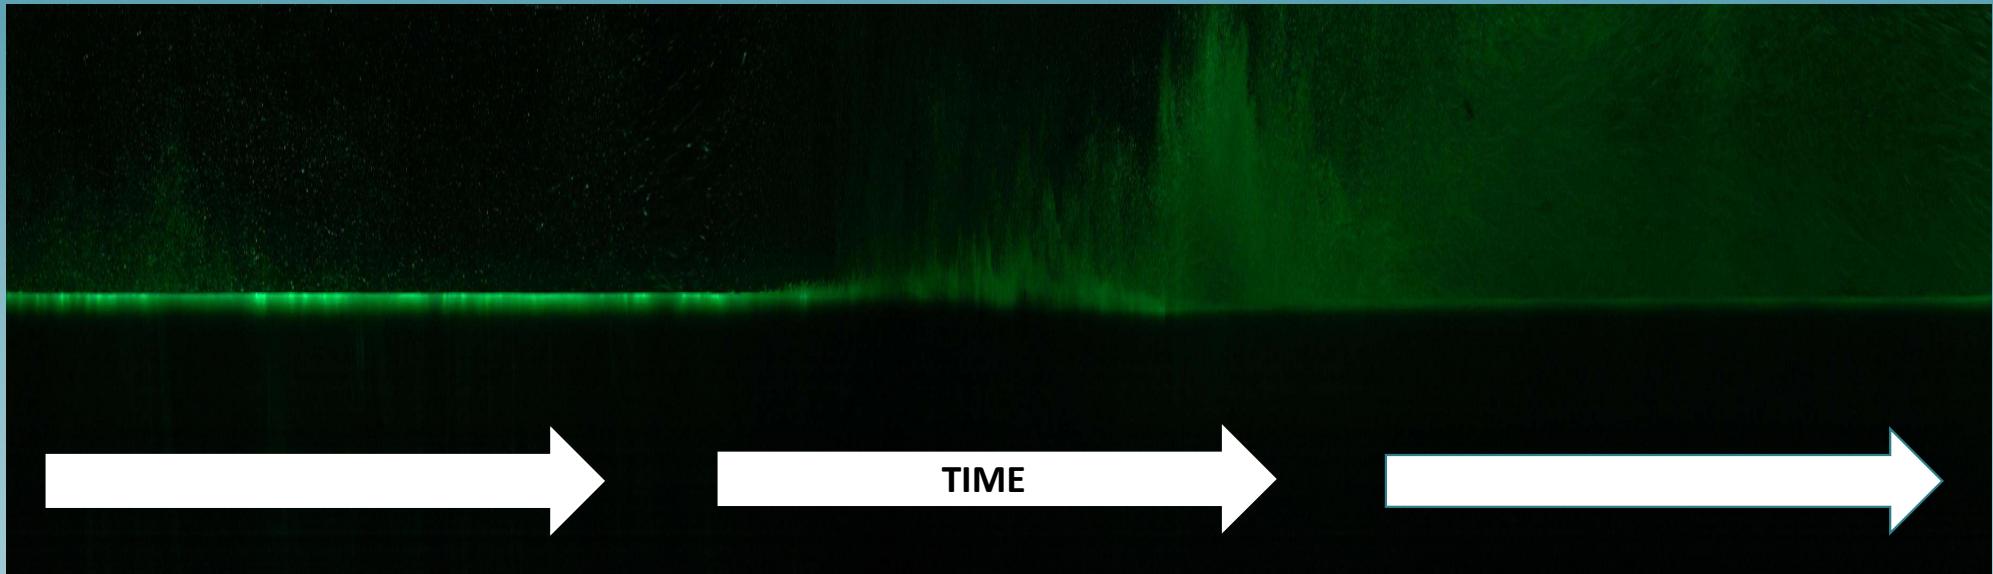

Frame #0381

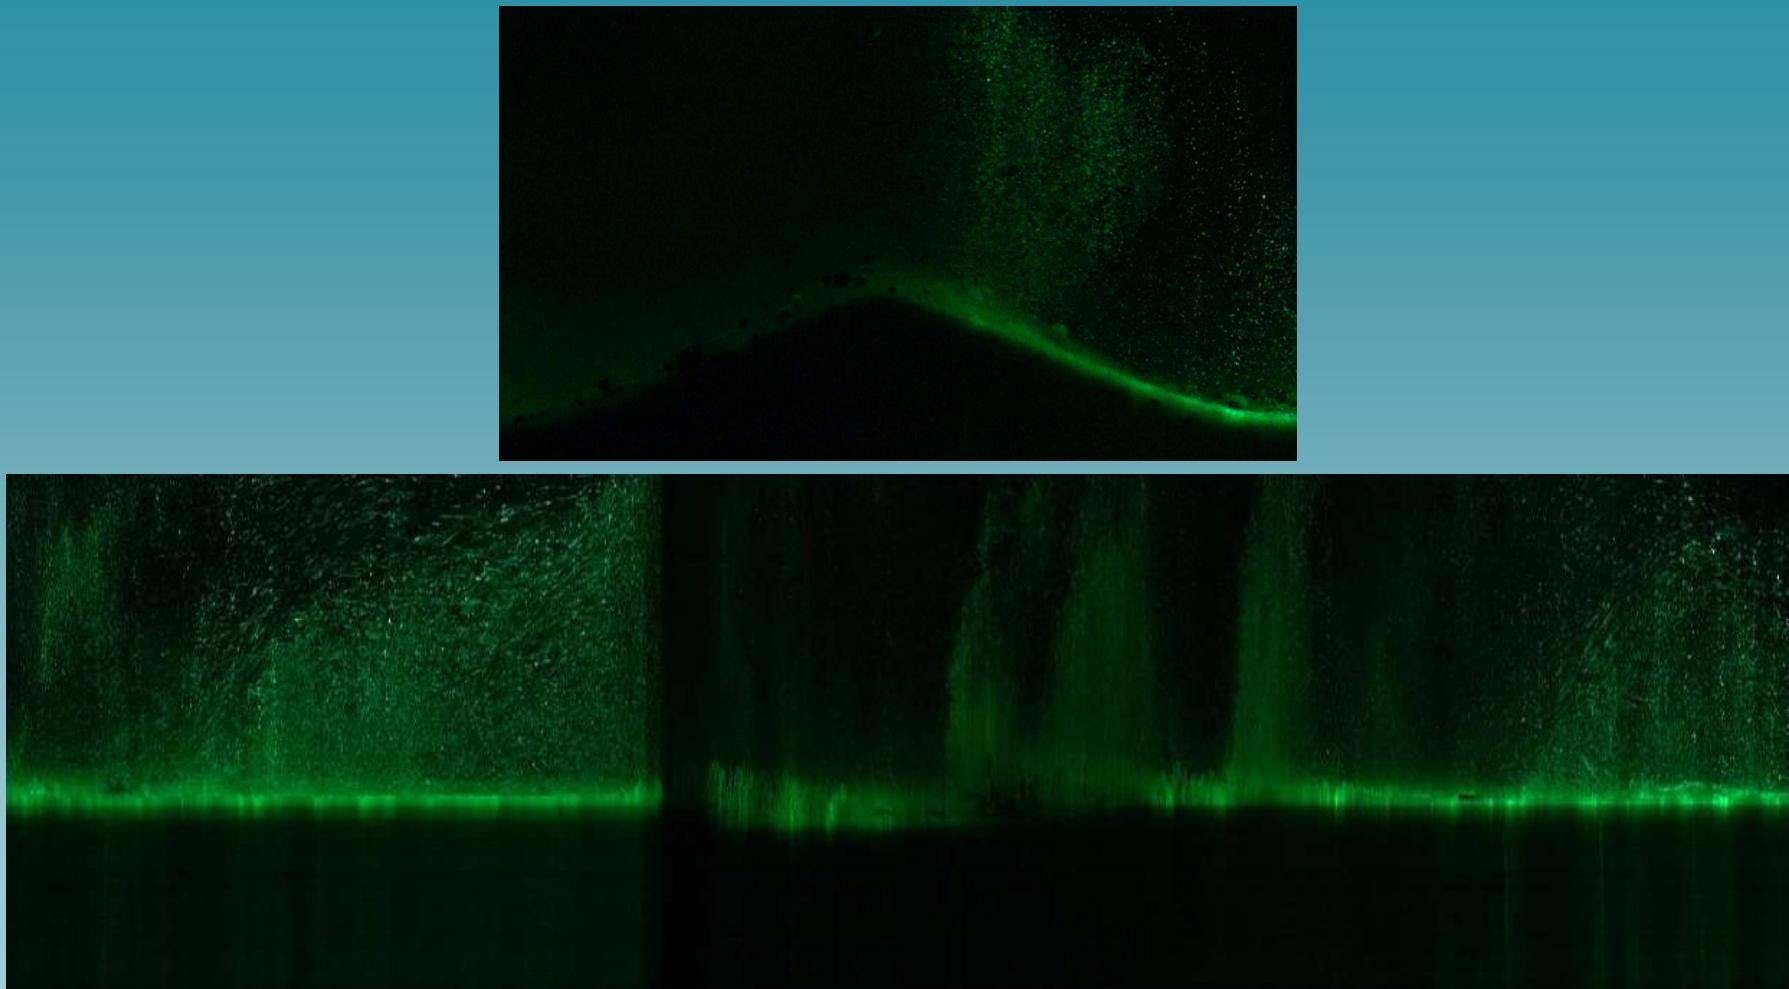

Timestack Images

- Coordinate line over wave period of 3.8 seconds

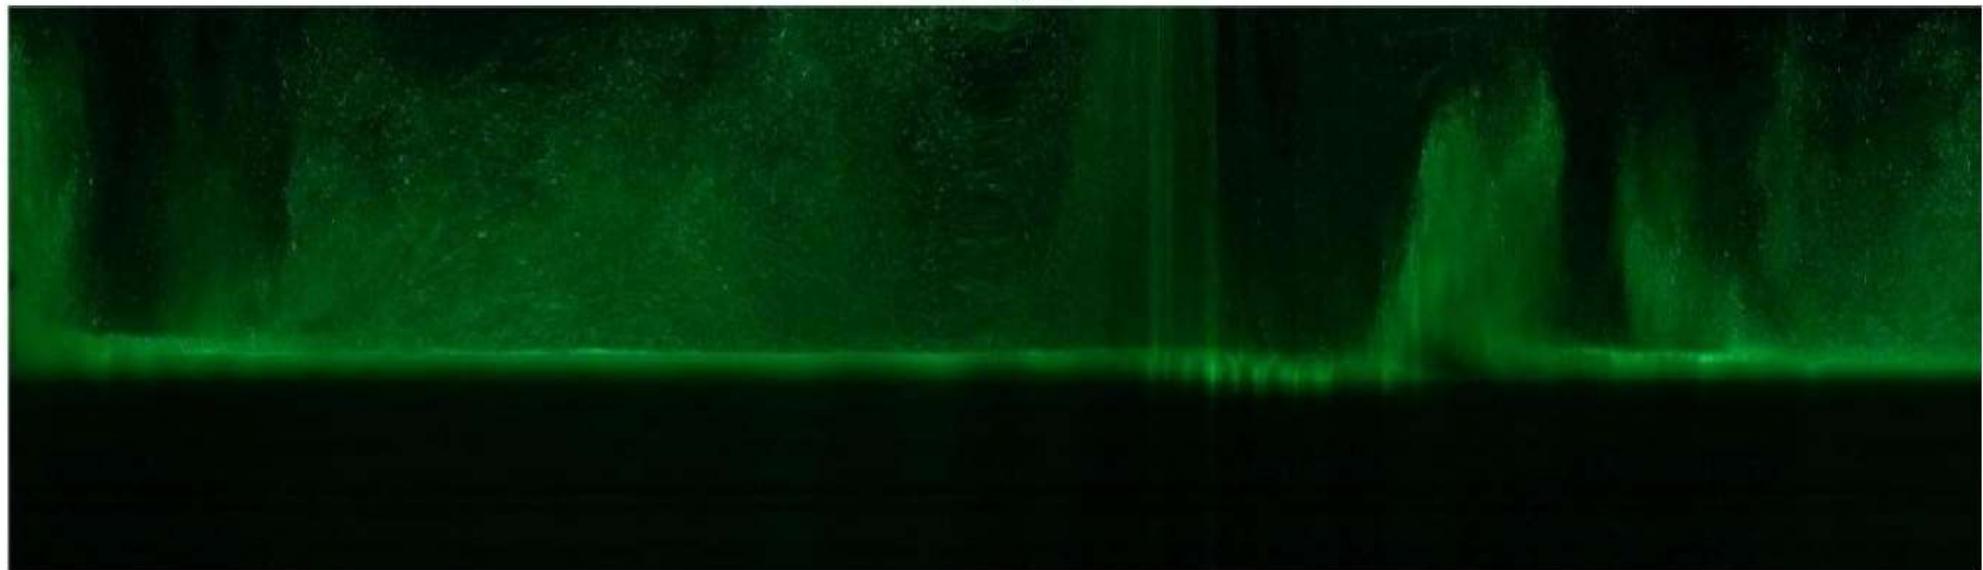

Panel 9: Irregular

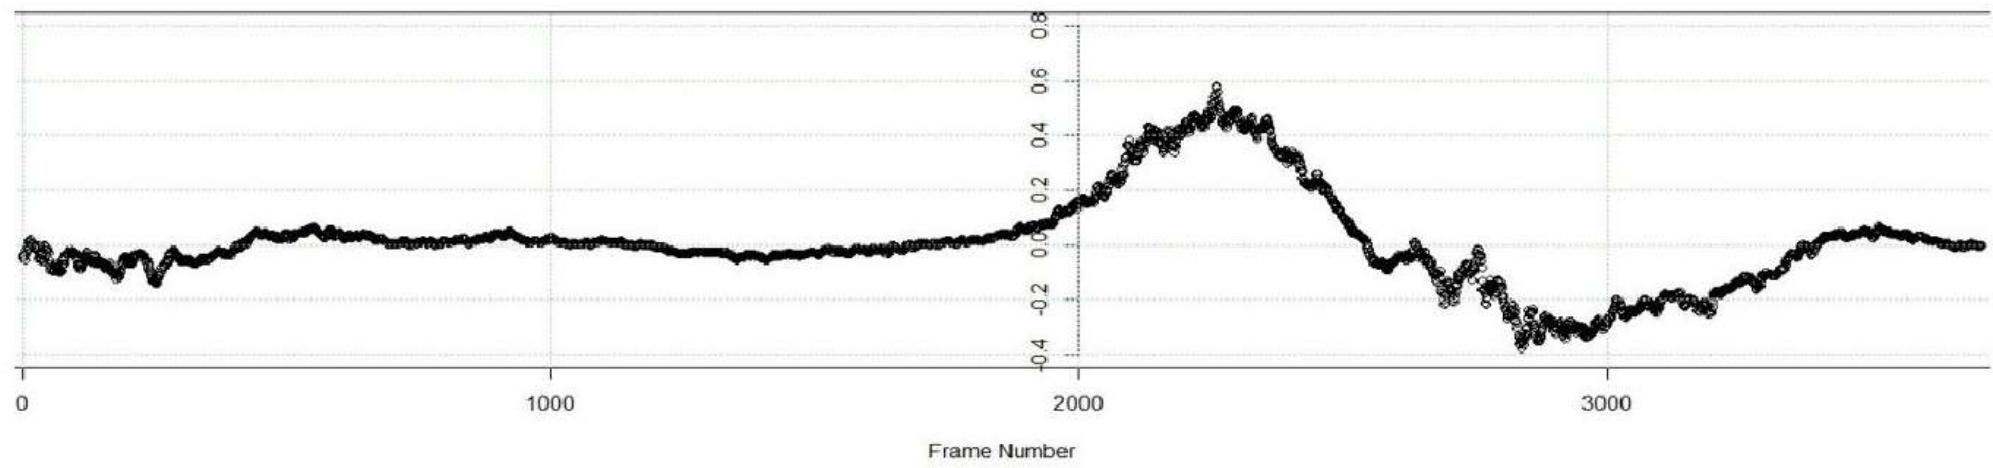

Panel 4: Regular

Time Averaged Velocity over 1/100th of Second, Panel 7 Reg

Sliding Window

Time Averaging

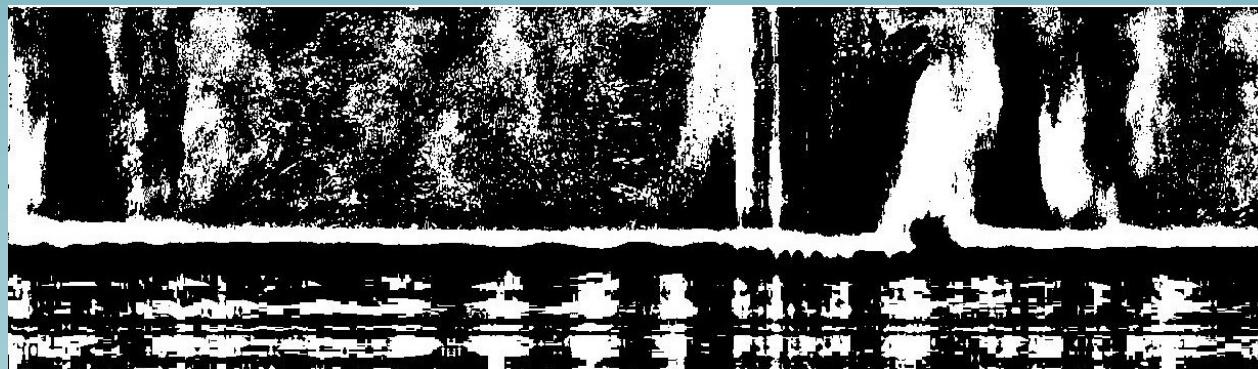

Edge Detection and Line Detection

Panel 5:
Irregular

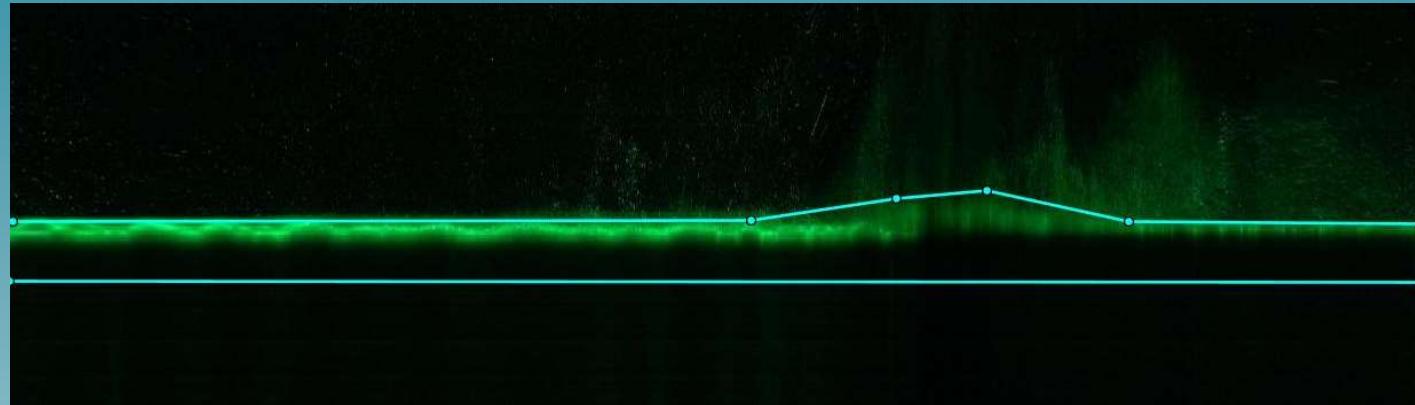

Panel 7:
Regular

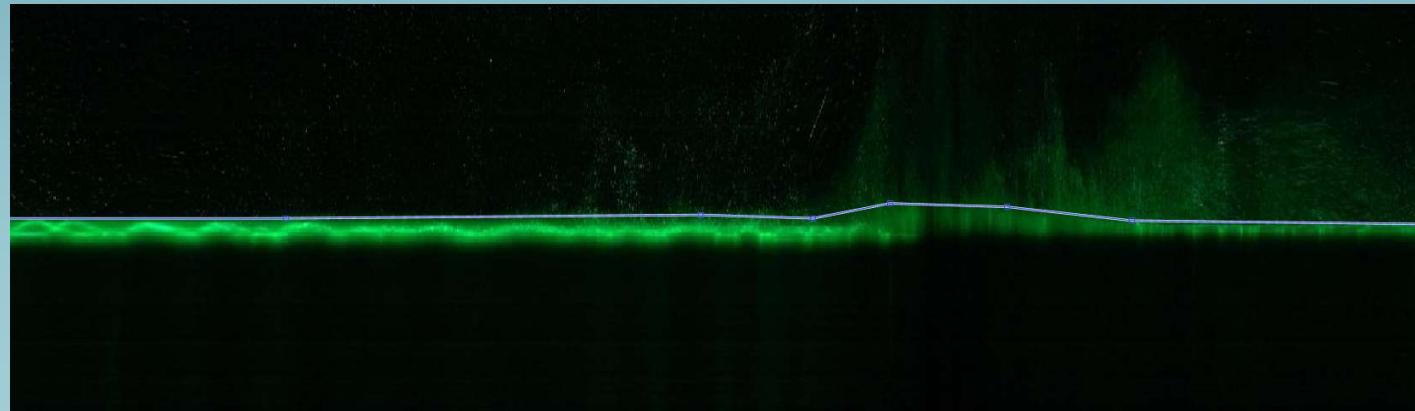

Manual Lines

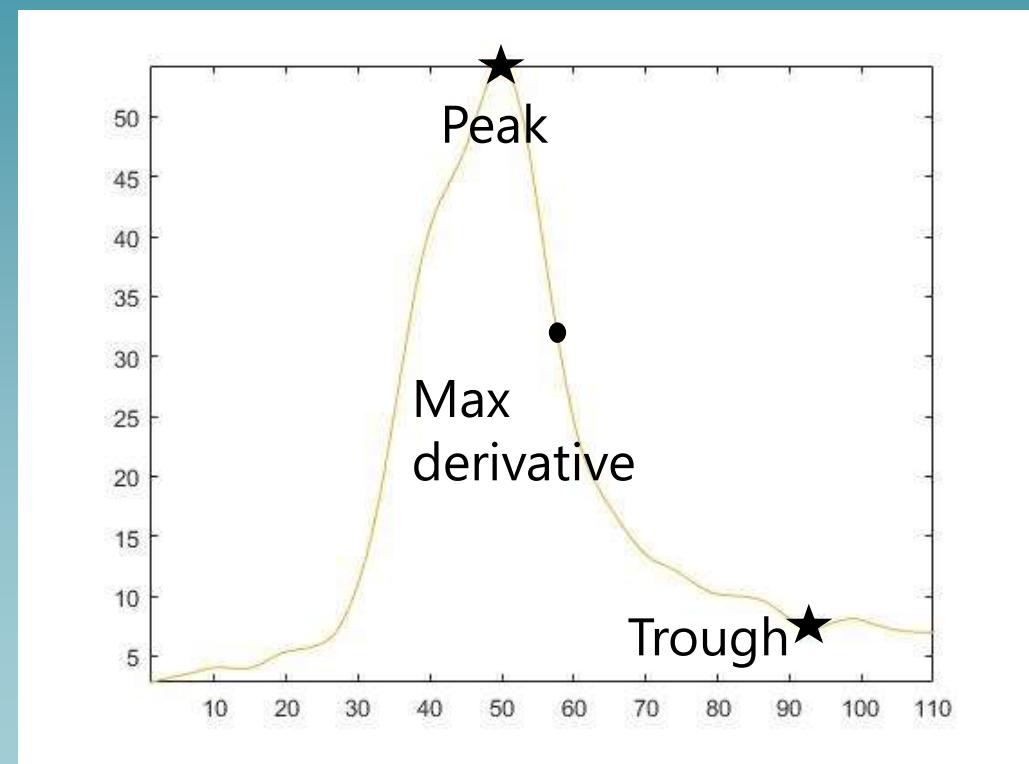

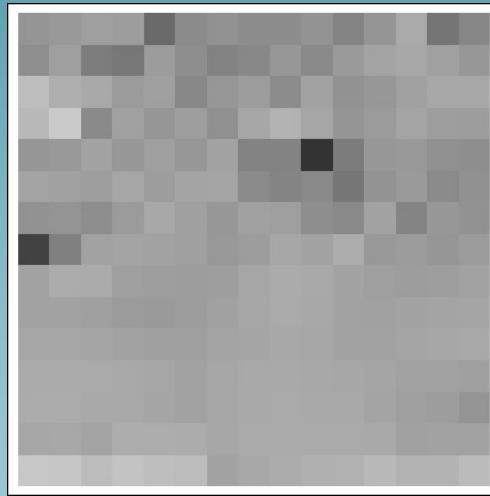

Version 1

Version 2

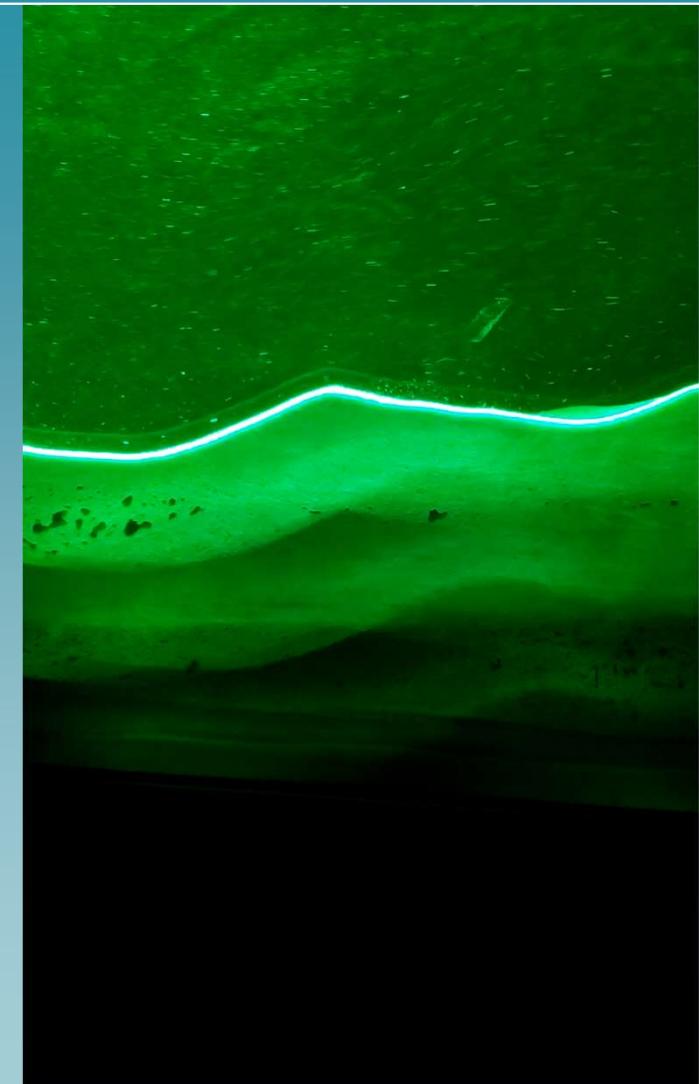

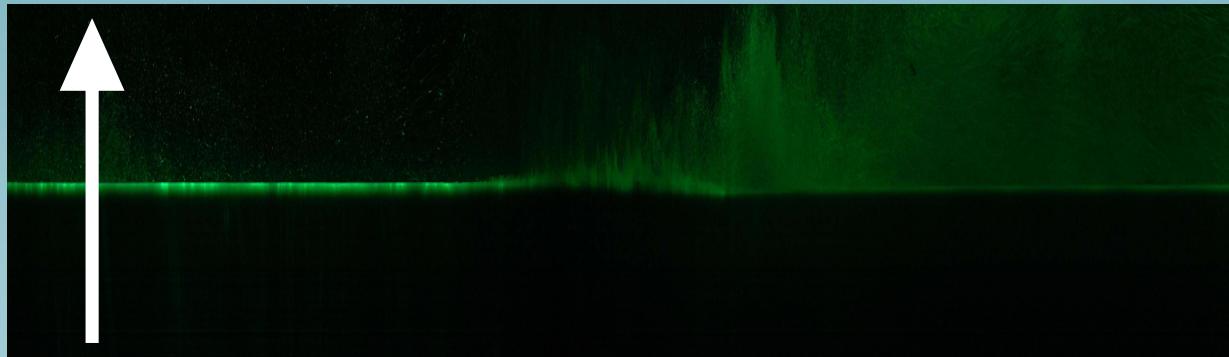

Automated Process: Pixel Intensity

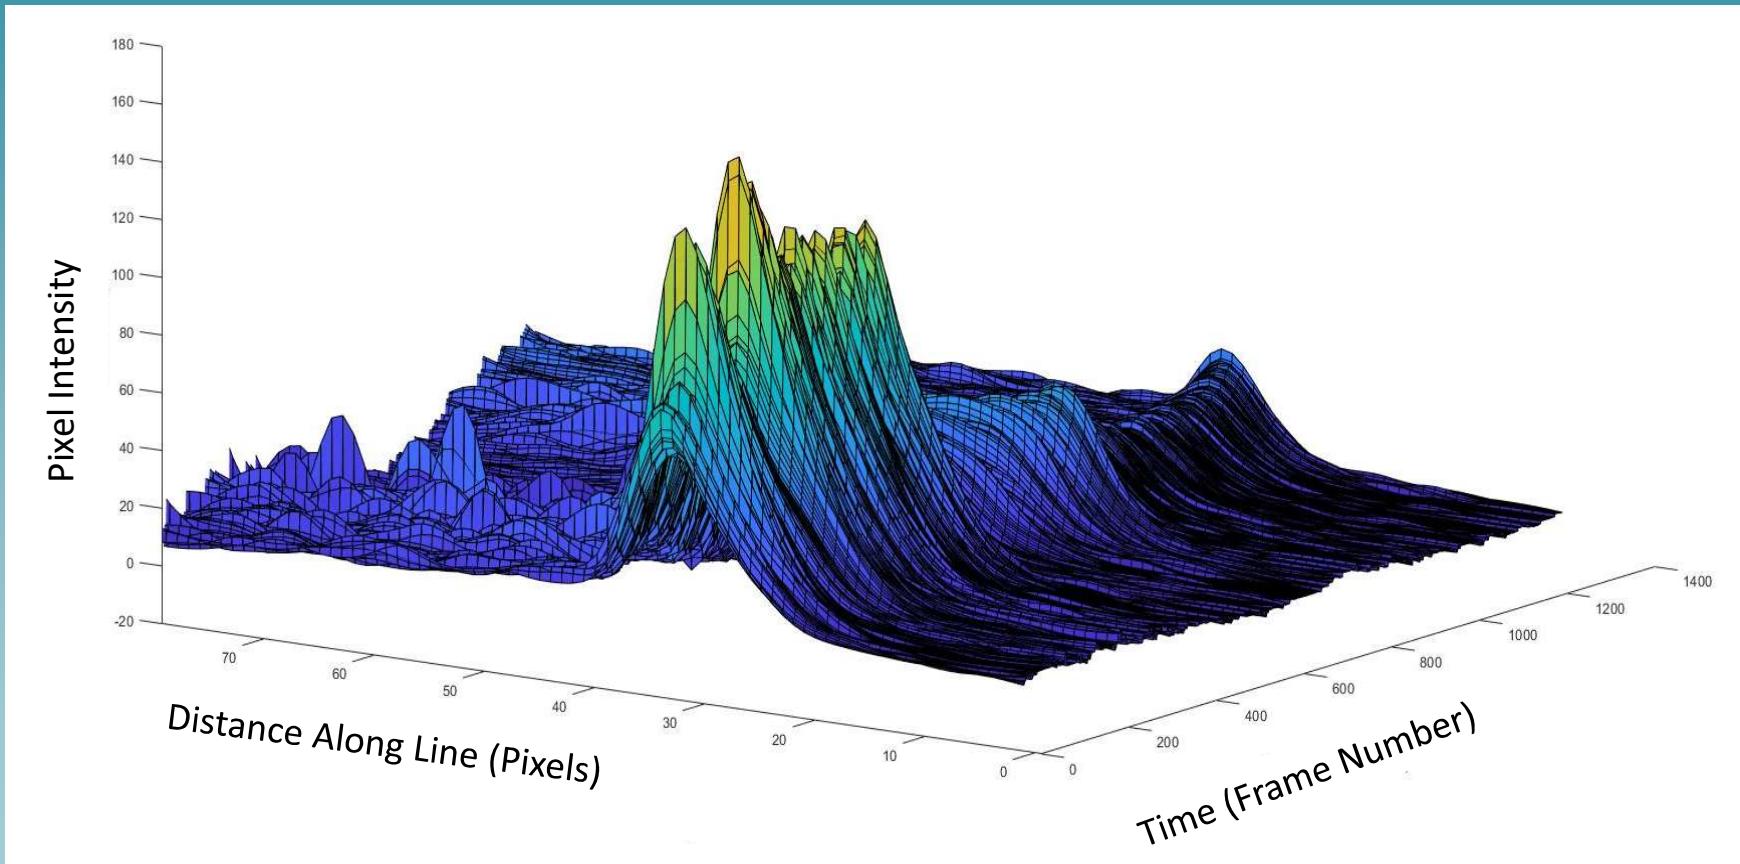

Adjustments

- High intensity suspended load
 - Cropping
 - Direction of analysis
- Differing pixel intensity distributions

3-D Velocity Plot

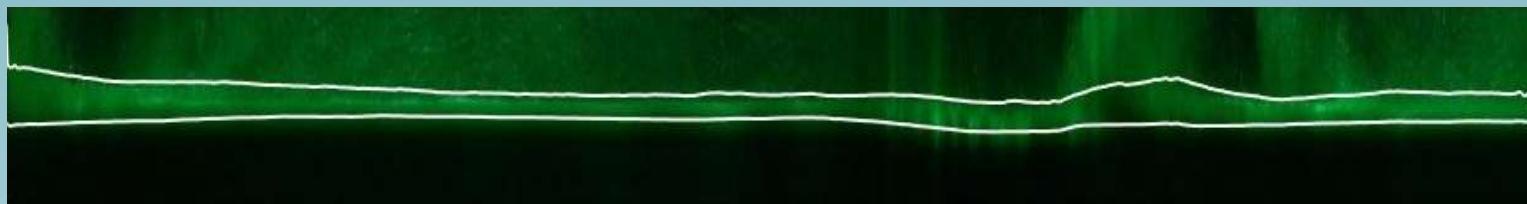

SMAG REU 2022

Automatic Lines

Panel 4: Regular, sliding window

Panel 7: Irregular, sliding window

Calculating Active Bed Thickness

- Bed vs. Active Bed
- Accounting for the extent of light penetration into the bed

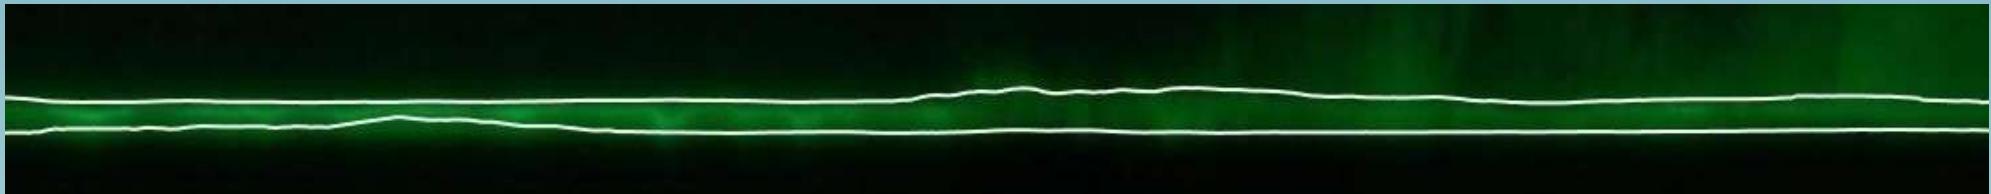

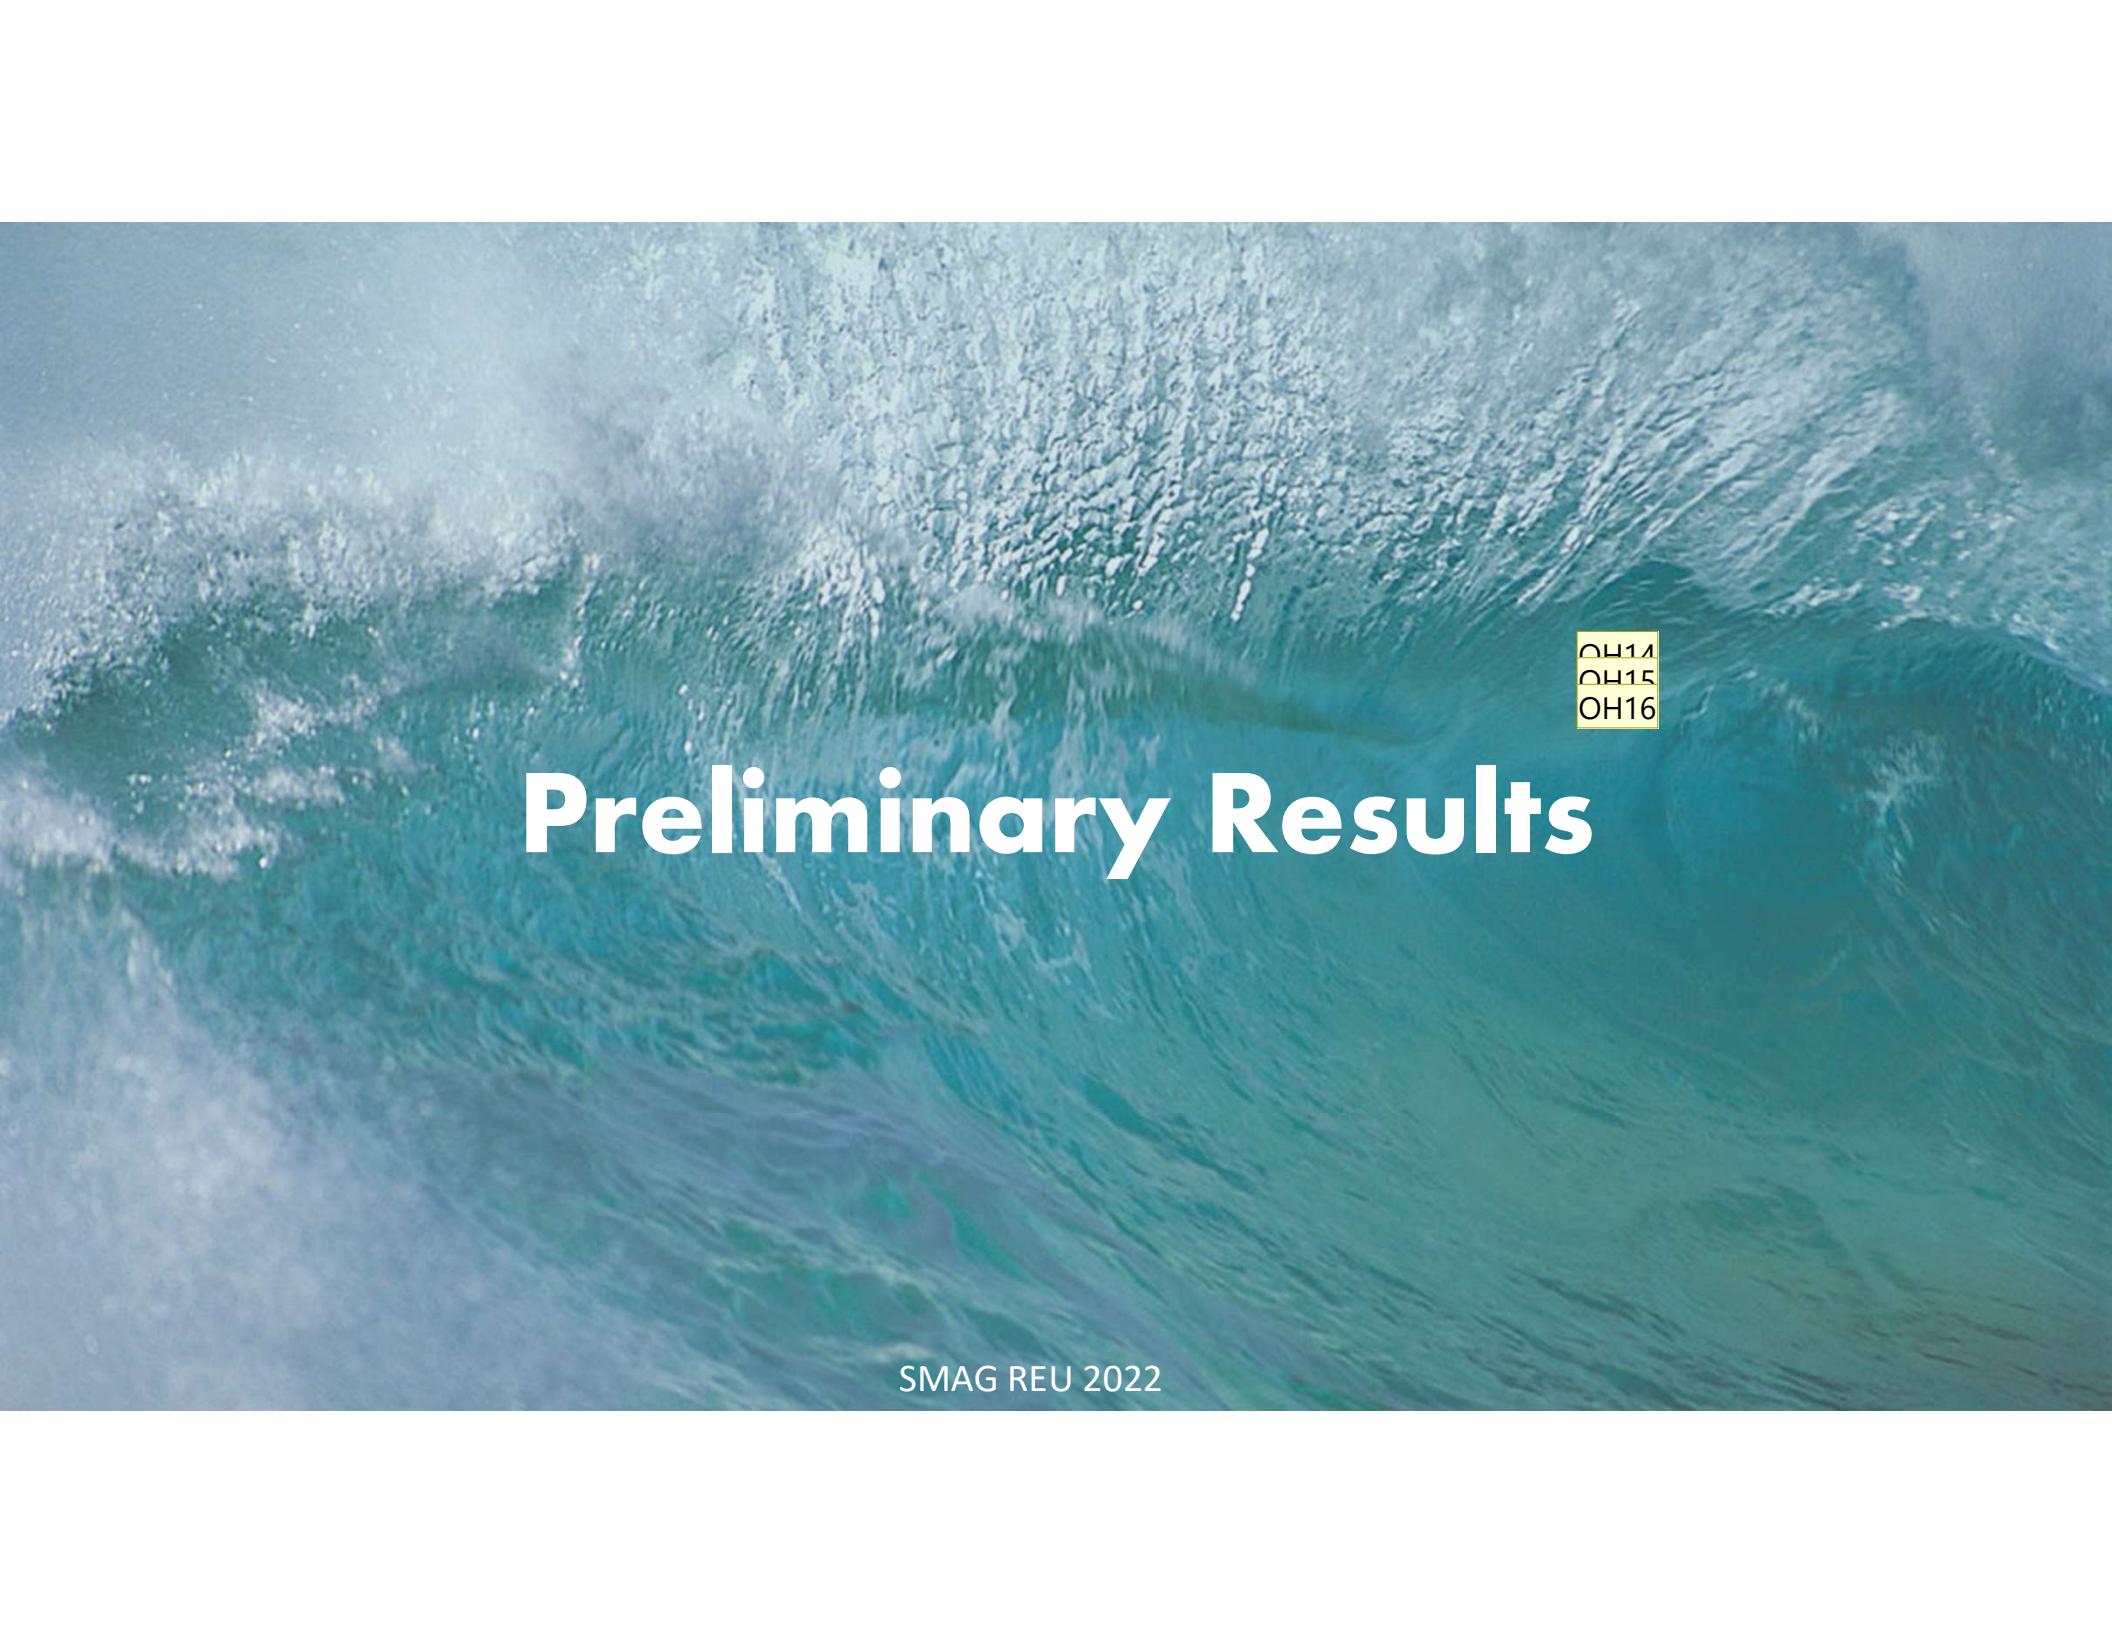

Denoising

Original

Denoised with a Gaussian filter

Plotting Active Bed Thickness

Panel 7: Irregular – Bed Outline

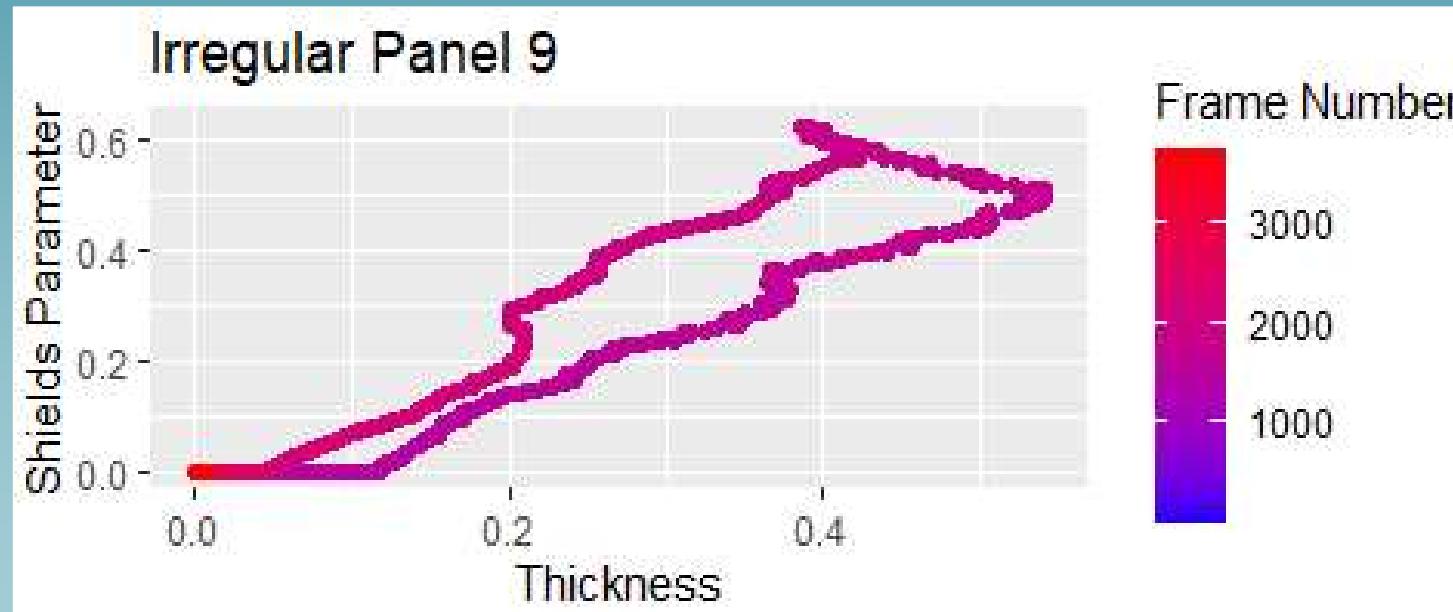

Panel 7: Irregular – Plot of Active Bed Thickness

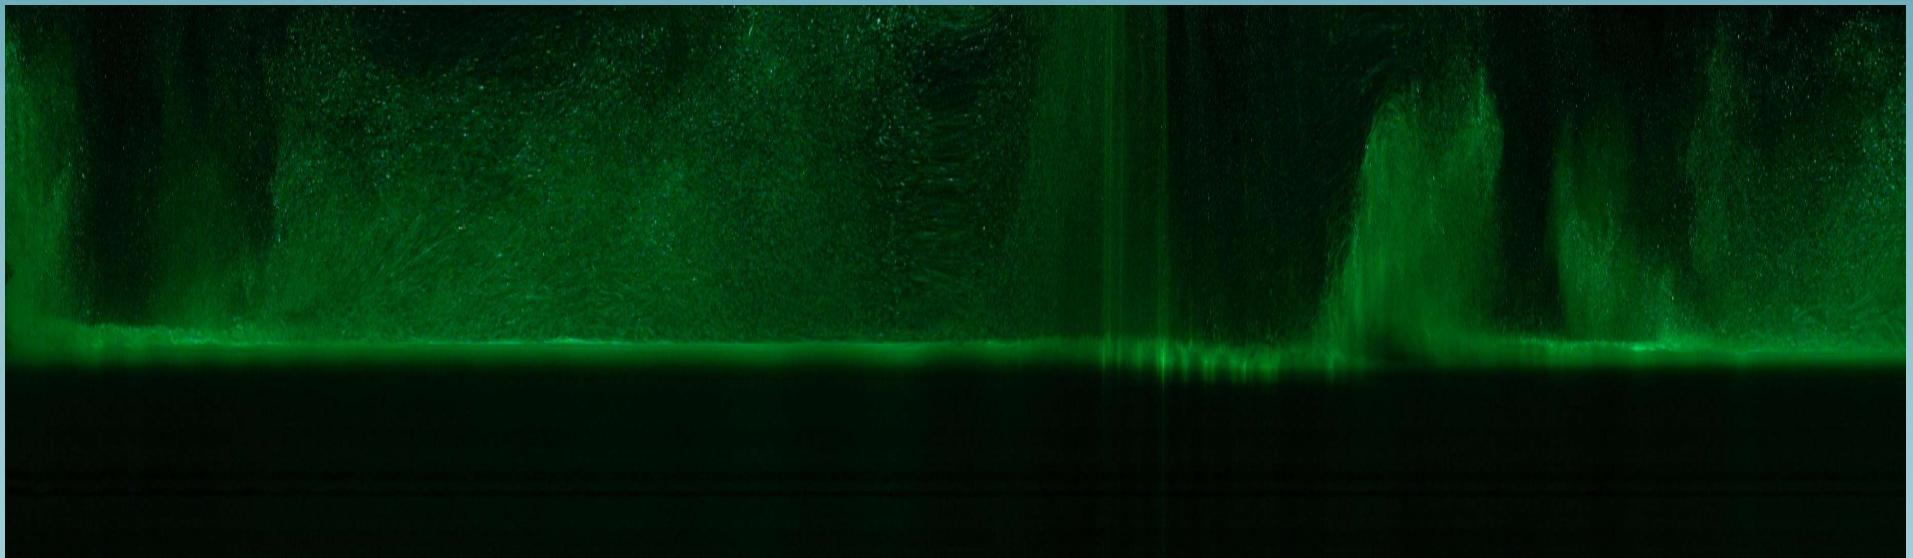

Shields Parameter vs Active Bed

- Shields Parameter is highest when the crest passes

Future Research

- Correlate pixel intensity with velocity
- Calculate a flux rate based on wave characteristics
- Compare to Ursell number
